

Fleetwood Dc Sub-Station

A circa £32,000 design, build project has been successfully completed for Blackpool Transport for the electrical installation on a new DC Sub-station at Fleetwood/Lancashire. The new Sub-station is part of a £100m upgrade of the 125 year old famous Blackpool Tram Network.

Work included installing a new HV AC/DC transformer rectifier, DC switchgear, Battery tripping system, Traction feeders and all inter-tripping and safety systems.

All the Sub-Station trip protection was also design and installed by Austin-Lenika Contracts Ltd.

← New DC switchboard c/w Earth Leakage

← New bespoke negative DC Bar c/w voltage limiting diode
